DETAILED ACTION

Double Patenting

1. Claims 1-12 are provisionally rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over Claims 1-18 of copending Application No. 10/758,853. Although the conflicting claims are not identical, they are not patentably distinct from each other because it is obvious that the claimed combinations of Claims 1-18 of Application No. 10/758,853 cover the instant claimed application/invention.

This is a <u>provisional</u> obviousness-type double patenting rejection because the conflicting claims have not in fact been patented.

Appropriate action is required.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 3. Claims 1-12 are rejected under 35 U.S.C. 102(b) as being anticipated by Suzuki et al. (US PG Pub. No. 2002/0032616), [hereinafter Suzuki].

Referring to Claim 1: Suzuki discusses a mobile commerce system comprising: a plurality of mobile server wallets each wallet having an association with a corresponding subscriber in a wireless service provider network (Suzuki: Figures 3-4, 6-

7; Page 2, Paragraph 0030//Suzuki displays figures which depict a system that is capable of facilitating the transactions between multiple mobile server wallet's//); a proxy server disposed in said wireless service provider network (Suzuki: Figures 3-4, 6-7; Page 2, Paragraph 0030//In addition, Suzuki discloses a system which possesses a content proxy server//); and a filter plug-in coupled to said proxy server and configured to intercept selected payment messages flowing through the proxy server and to route said payment messages to selected ones of said mobile server wallets (Suzuki: Page 2, Paragraphs 0028-0029; Page 3, Paragraphs 0033-0038//Upon system authentication within the network, payment messages are routed back and forth via the system through the filter plug-in coupled to the proxy server//).

Referring to Claim 2: Suzuki teaches a mobile commerce system further comprising a plurality of profiles communicatively linked to said filter plug-in, each of said profiles specifying a merchant configured to engage in mobile commerce transactions through said wireless service provider network (Suzuki: Figures 3-4, 6-7; Page 2, Paragraph 0030//Suzuki displays figures which depict a system that is capable of facilitating the transactions between multiple mobile server wallet's, hence, an establishment of profiles which correspond to each mobile server wallet//), said filter plug-in having a further configuration for routing said payment messages said selected ones of said mobile server wallets when a source of said payment messages matches a merchant identity specified in at least one of said profiles (Suzuki: Figures 3, 4, 7; Page 2, Paragraphs 0020-0023//Upon verification of receipt [payment relationship/correlation], a payment transaction process occurs with the system//).

Application/Control Number: 10/675,503

Art Unit: 3609

Referring to Claim 3: Suzuki discloses a mobile commerce system wherein individual mobile server wallets are disposed in at least one of an Internet service provider server, said wireless service provider network server, a merchant server, a financial institution server and a portal server.

The examiner notes that the specific group of network communication server's chosen to which the mobile commerce system terminates herein to perform such payment requests does not functionally affect the transaction. These parameters qualify as non-functional descriptive material and do not alter how the method operates. Therefore, this descriptive material is given minimal weight; see *In re Gulack, 703 F.2d 1381, 1385, 217 USPQ 401 (Fed. Cir. 1983); In re Lowry, 32 F.3d 1579, 32 USPQ2d 1031 (Fed. Cir. 1994).*

Referring to Claim 4: Suzuki shows a mobile commerce system wherein at least one of said profiles further comprises a specification of a markup language able to be processed in said filter plug-in (Suzuki: Figures 1 & 2; Page 4, Paragraphs 0049-0055//Suzuki shows a terminal equipped with a web browser, a shop server with accessibility to the Hyper Text Transfer Protocol [HTTP], and a wallet server having contents such as Hyper Text Markup Language [HTML]//).

Referring to Claim 5: Suzuki discusses a method for processing mobile commerce transactions in a wireless service provider network, the method comprising the steps of: filtering payment messages flowing between merchants and subscribers to the wireless service provider network to identify specific payment messages associated with specific subscribers in the wireless service provider network (Suzuki: Figure 1(#40);

Page 2, Paragraphs 0021, 0030; Page 3, Paragraph 0048; Page 4, Paragraph 0053//Suzuki refers to a system which combines multiple mobile server wallet's and allows for financial transactions to take place - The system as disclosed can be utilized by both on-line merchants and end-users//); and routing filtered ones of said payment messages to specified mobile server wallets associated with said specific subscribers (Suzuki: Page 2, Paragraphs 0016, 0023; Page 4, Paragraphs 0052-0053//A unique identifier is traced with the payment transactional information for successful routing//).

Referring to Claim 6: Suzuki teaches a method further comprising the steps of: consulting filters which specify specific ones of said merchants (Suzuki: Figures 3, 4, 7; Page 2, Paragraphs 0020-0023//Suzuki teaches a system which is able to filter processes of both merchants, customers, etc.//); monitoring message traffic flowing from said merchants (Suzuki: Page 2, Paragraphs 0016, 0023; Page 4, Paragraphs 0052-0053//A unique identifier is traced with the payment transactional information for successful routing, hence, a traffic flow is indirectly enabled within the system disclosed//); and intervening in purchase transactions originating in said merchants (Suzuki: Page 2, Paragraphs 0016, 0021, 0030; Page 3, Paragraphs 0031-0032//Suzuki refers to a system which combines multiple MSWP's and allows for financial transactions to take place - Suzuki discloses a e-commerce payment transaction system and method//).

Referring to Claim 7: Suzuki discloses a method wherein said routing step comprises routing filtered ones of said payment message to specified mobile server wallets associated with said specific subscribers and positioned outside of the wireless

service provider network (Suzuki: Page 2, Paragraphs 0016, 0023, 0028-0029; Page 3, Paragraphs 0033-0038; Page 4, Paragraphs 0052-0053//Suzuki provides a system which is able to facilitate payment routing outside and inside the network via a network gateway [GW]//).

Referring to Claim 8: Claim 8 is rejected on the same basis, as is Claim 7, as mentioned supra.

Referring to Claim 9: Suzuki discusses a machine readable storage having stored thereon a computer program for processing mobile commerce transactions in a wireless service provider network (Suzuki: Page 1, Paragraph 0009//Suzuki discloses software and a terminal which can be utilized to facilitate payment transactions, hence, "machine readable storage"//), the computer program comprising a routine set of instructions for causing the machine to perform the steps of: filtering payment messages flowing between merchants and subscribers to the wireless service provider network to identify specific payment messages associated with specific subscribers in the wireless service provider network (Suzuki: Page 2, Paragraph 0016; Page 3, Paragraphs 0031-0032//A payment transaction is dedicated to a given mobile server wallet/); and routing filtered ones of said payment messages to specified mobile server wallets associated with said specific subscribers (Suzuki: Page 2, Paragraphs 0016, 0023; Page 4, Paragraphs 0052-0053//A unique identifier is traced with the payment transactional information//).

Referring to Claim 10: Suzuki teaches a machine readable storage (Suzuki: Page 1, Paragraph 0009//Suzuki discloses software and a terminal which can be utilized to

facilitate payment transactions, hence, "machine readable storage"//) further comprising the steps of: consulting filters which specify specific ones of said merchants (Suzuki: Figures 3, 4, 7; Page 2, Paragraphs 0020-0023//Suzuki teaches a system which is able to filter processes of both merchants, customers, etc.//); monitoring message traffic flowing from said merchants (Suzuki: Page 2, Paragraphs 0016, 0023; Page 4, Paragraphs 0052-0053//A unique identifier is traced with the payment transactional information for successful routing, hence, a traffic flow is indirectly enabled within the system disclosed//); and intervening in purchase transactions originating in said merchants (Suzuki: Page 2, Paragraphs 0016, 0021, 0030; Page 3, Paragraphs 0031-0032//Suzuki refers to a system which combines multiple MSWP's and allows for financial transactions to take place - Suzuki discloses a e-commerce payment transaction system and method//).

Referring to Claim 11: Suzuki discloses a machine readable storage (Suzuki: Page 1, Paragraph 0009//Suzuki discloses software and a terminal which can be utilized to facilitate payment transactions, hence, "machine readable storage"//) wherein said routing step comprises routing filtered ones of said payment message to specified mobile server wallets associated with said specific subscribers and positioned outside of the wireless service provider network (Suzuki: Page 2, Paragraphs 0016, 0023, 0028-0029; Page 3, Paragraphs 0033-0038; Page 4, Paragraphs 0052-0053//Suzuki provides a system which is able to facilitate payment routing outside and inside the network via a network gateway [GW]//).

Referring to Claim 12: Suzuki shows a machine readable storage (Suzuki: Page 1, Paragraph 0009//Suzuki discloses software and a terminal which can be utilized to facilitate payment transactions, hence, "machine readable storage"//) wherein said routing step comprising routing filtered ones of said payment messages to specified mobile server wallets associated with said specific subscribers and selected by said specific subscribers (Suzuki: Page 2, Paragraphs 0016, 0023; Page 4, Paragraphs 0052-0053//A unique identifier is traced with the payment transactional information//).

Conclusion

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Steed et al. (US PG. Pub. No. 2002/0107755) teach a server-based electronic wallet system.

Schuba et al. (US PG. Pub. No. 2002/0052842) show initiation of an electronic payment transaction.

Any inquiry concerning this communication should be directed to Benjamin S. Fields at telephone number 571.272.9734. The examiner can normally be reached Monday through Thursday, 9am to 7pm. If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Khoi Tran can be reached at (571) 272-
